FEATURES

JungSon JASC-02 Double Cores Balanced Signal Cable

The JASC-02 is JungSon's most cost effective interconnect that contains two individual shielded conductors made from oxygen-free-pure-copper with a 5N (99.999%) purity. Each conductor contains a precisely-organized array of 120 fine OFPC strands wound around a centre thicker OFPC core and polypropylene dielectric. As a result, the cable can faithfully transmit bass and treble energy, and remarkably reject a wider range of noise. High silver content solder and proprietary soldering techniques at all stages of assembly help maintain superior sound quality. JASC-02 is available in high quality XLR (balanced) or RCA (unbalanced) plugs.

FEATURES

JungSon JFIC-06 Optical Signal Cable

The JFIC-06 transfers signal efficiently and low distortion rate. It has excellent flexibility, elasticity, strength and climate tolerations. It is an ideal interconnect cable for the digital TV, DVD player, AV amplifier and digital camera.

JFIC-06 Specifications

Cable Diameter (mm)	Insulation layer (mm)	Aperture	Temperature Range	Max. Attenuation
1.402	1.402	0.51	-55°C ~ 70°C	0.16dB/m
